Professional Summary

DevOps-focused Software Engineer with hands-on experience in **Linux, cloud infrastructure, Docker, application deployment, Nginx, Git/GitHub, and CI/CD practices**. Experienced in working with Python/Django and Next.js applications and supporting their deployment across Linux-based and cloud environments.

Hands-on experience with **AWS EC2 and S3, Docker and Docker Compose, Nginx configuration, Linux server administration, application environment setup, Git-based workflows, and deployment troubleshooting**. Strong understanding of application deployment, reverse proxy configuration, networking fundamentals, service management, and production-oriented deployment practices.

Professional Experience

Arekiv Global Research Platforms Pvt. Ltd. India

Full Stack Developer / DevOps-Focused Engineer **Jan 2026 – Present**

- Worked across application development and deployment activities for client-facing applications using Python, Django, Next.js, REST APIs, PostgreSQL, and MongoDB.
- Configured and maintained **Linux-based development and deployment environments** for web applications.
- Worked with **Docker and Docker Compose** to containerize frontend and backend services and simplify application deployment.
- Configured **Nginx** as a web server and reverse proxy for application services.
- Worked with **AWS infrastructure**, including EC2 and S3, for application hosting and object/file storage.
- Managed application configuration using **environment variables and deployment-specific settings**.
- Used **Git and GitHub** for source-code management, branching, version control, and deployment workflows.
- Worked with **CI/CD concepts and GitHub Actions** for application build, testing, and deployment workflows.
- Troubleshot deployment issues involving Linux services, ports, firewall rules, Nginx configuration, application processes, environment variables, and network connectivity.
- Supported deployment and integration of **Python/Django services with PostgreSQL, Redis, and Celery**.
- Collaborated with development teams to identify deployment issues and improve application delivery workflows.

DevOps Projects

TaskFlow Pro – Task Management SaaS

Next.js, Django, PostgreSQL, Redis, Docker, Docker Compose, Nginx, GitHub Actions

- Worked on a deployment-ready architecture for a full-stack SaaS application using Next.js frontend and Django REST Framework backend.
- Containerized frontend and backend services using **Docker** and managed multi-service environments using **Docker Compose**.
- Configured frontend and backend services with appropriate ports, environment variables, and service communication.
- Configured **Nginx reverse proxy** for routing web traffic to application services.
- Worked with **PostgreSQL, Redis, and Celery** as supporting application infrastructure.
- Used Git/GitHub workflows for source management and deployment preparation.
- Worked with Linux-based environments for application setup, service management, troubleshooting, and deployment.

Cloud Application Deployment

AWS EC2, AWS S3, Linux, Nginx, Docker, Git

- Deployed web applications on **Linux-based cloud virtual machines**.
- Configured **AWS EC2** environments for application hosting.
- Configured **Nginx** for web-server and reverse-proxy requirements.
- Worked with **AWS S3** for application file and object storage.
- Configured application environments, ports, services, and server-level dependencies.
- Troubleshot connectivity and deployment issues related to firewall rules, ports, services, and web-server configuration.

- Used Git/GitHub-based workflows for application source management and deployment preparation.

Technical Skills

Cloud:	AWS EC2, AWS S3, GCP Compute Engine
DevOps & CI/CD:	Docker, Docker Compose, GitHub Actions, CI/CD, Deployment Automation
Operating Systems:	Linux, Ubuntu
Web Server:	Nginx, HTTP/HTTPS, Reverse Proxy
Networking:	Ports, Firewall Fundamentals, DNS, Application Connectivity
Version Control:	Git, GitHub
Backend:	Python, Django, Django REST Framework, REST APIs
Frontend:	Next.js, React.js, TypeScript
Databases:	PostgreSQL, MongoDB, MySQL, Redis
Task Processing:	Celery, Redis
Tools:	Postman, VS Code
Practices:	Agile, Debugging, Testing, API Integration, Application Deployment

DevOps Knowledge

- Linux server administration and application environment setup.
- Docker image, container, and lifecycle management.
- Docker Compose-based multi-service application deployment.
- Nginx web server and reverse proxy configuration.
- Git/GitHub version control and branching workflows.
- CI/CD pipeline concepts and GitHub Actions workflows.
- AWS EC2 application hosting and deployment.
- AWS S3 object and file storage.
- Environment and configuration management.
- Application networking, ports, firewall fundamentals, and connectivity troubleshooting.
- Application logs, service management, and deployment troubleshooting.

Education

Bachelor of Technology – Computer Science Engineering **2024**
Bikaner Technical University CGPA: **8.3**

12th Standard **84%**
UP Board

10th Standard **85%**
UP Board

Certifications

- HackerRank Python Certification
- HackerRank React Certification
- DevOps Basics – CloudDevopsHub with Vikas Sir (AWS EC2, S3, Linux)
